Third Party Patch Management Feature Guide

Third Party Patch Management

Maintaining the security of workstations and servers has historically meant remaining up to date with Operating System patches. As time has progressed and hackers have developed more advanced methods of penetrating systems and networks many threats have moved to third party applications. Notoriously hard to maintain, patch and monitor, these applications offer a plethora of attack vectors for both skilled attackers and “script-kiddies” looking to cause damage or access sensitive data.

Intrinium has designed a third party, cloud-based third party patch management solution that is secure, safe and easy to implement. Currently Intrinium’s solution can audit and provide patch management of the following applications:

7-Zip	eMule	K-Lite Codecs	Recuva
Ad-Aware	Evernote	KMPlayer	Revo
Adobe AIR	Everything	Launchy	Skype
Adobe Flash	FastStone	LibreOffice	Songbird
Adobe Java	FileZilla	Malwarebytes	Speccy
Adobe reader	Foobar2000	MediaMonkey	Spotify
Adobe Shockwave	Foxit Reader	Messenger	Spybot
AIM	GIMP	Microsoft .NET	Steam
AIMP	Glary	Microsoft Silverlight	SumatraPDF
Apple Safari	GOM	Mozilla Firefox	SuperAntiSpyware
Audacity	Google Chrome	Mozilla Thunderbird	TeamView
Auslogics	Google Earth	Mozy	TeraCopy
Avast Antivirus	Google Picasa	Notepad++	TrueCrypt
AVG	Google Talk	OpenOffice	uTorrent
CCCP	Hulu	Opera	VLC
CCleaner	ImgBurn	Paint.NET	Winamp
CDBurnerXP	InfraRecorder	PDFCreator	WinRAR
CutePDF	Inkscape	Pidgin	WinSCP
Defraggler	IrfanView	PuTTY	XnView
Digsby	iTunes	Python	Yahoo!
Dropbox	JDK	QuickTime	
Eclipse	KeePass	RealVNC	

Frequently Asked Questions

Q. Can I “lock” the version of a program to a specific level?

A. Absolutely! Simply contact your IT management consultant for assistance.

Q. Will more programs be added to the list of supported applications for update?

A. Yes, we are adding more applications as the developers provide functionality for auditing and updating their software. Popular applications are always added first!

Q. What if I have a custom application that requires updating. Can you handle this through your solution?

A. Probably. Depending on the product and its features this may or may not be possible, and additional charges may apply. Contact your IT management consultant for details.

Q. How does the solution work?

A. Through our cloud-based mechanism, all we require is an always-on, Windows-based device on your network and a set of Administrator credentials that will allow access to the devices which we are to patch manage. Through our agent on that system we will push updates to all systems you approve on a monthly basis, or more/less frequently based on your request. You will be provided with monthly management reports showing the status of updates and any systems that require manual intervention from your staff.

Technical Specifications

Update Scheduling

Default schedule: monthly updates.
Modifications to this schedule may be made at client request.

Cloud Communication Encryption Algorithm

AES-256 / SSL-128

Application OS Platform

Windows Server 2003
Windows Server 2008 / 2008 R2
Windows XP
Windows Vista
Windows 7
